

Sample evidence pack

Real engine output — Clervaux, Luxembourg · 2026-08-25

What this document is

This is the format of a Talaix site evidence pack, filled with a real engine run published on talaix.com on 2026-08-25. It is a sample of the deliverable, not a live run: run your own coordinates on the platform to get your own pack.

1. Site and method

Field	Value
Site	Clervaux, Luxembourg (anonymised demo company: "Demo Estates SA")
Coordinates analysed	50.0547 N, 6.0286 E
Engine run	2026-08-25
Hazards screened per site	up to 10
DNSH-relevant hazards for this asset	6 of 6 assessed with real data
Declared gaps	0 for this site
Evidence labels	OBSERVED · DOCUMENTED · REPORTED · MODELLED · INFERRED · UNKNOWN

2. Hazard evidence

Hazard	Level	Basis
Drought	Severe	Real data
Wind	Moderate	Real data
Flood	Low	Real data
Wildfire	Low	Real data
Hail	Low	Real data
Extreme heat	Low	Real data

In a customer pack every row also carries the dataset name, its version, the date range covered and the confidence behind the level. Where a dataset cannot be read for a site, the row is returned as UNKNOWN and listed under declared gaps — never filled in.

3. Compliance mapping (CSRD / ESRS)

Area	Status
ESRS E1 — physical climate risk	covered_by_evidence
ESRS E3 — water and marine resources	partial
Other ESRS areas	not_covered (declared)

This is an evidence layer, not assurance. CSRD limited assurance remains with your auditor or independent assurance provider.

4. Sources the engine draws on

Satellite and reanalysis: Sentinel-2, Landsat Collection 2, ERA5 and ERA5-Land, Open-Meteo, NASA FIRMS (VIIRS/MODIS), ESA WorldCover, GloFAS, SRTM/Copernicus DEM, WorldPop and OpenStreetMap. 25 datasets are integrated into the engine out of 167 catalogued; every source evaluated — integrated, candidate or rejected, with the reason — is public at talaix.com/sources.

5. Honesty contract and disclaimer

- Unavailable data is declared, never invented.
- Every figure carries its source, date and confidence.
- Levels are screening indicators unless explicitly labelled validated.
- No loss quantification: no AAL, PML or EP curves.
- Not assurance, not a Second Party Opinion, not investment or legal advice.

What it costs

- Free: multi-hazard analysis, the map, the CSRD applicability check, a simple PDF report.
- Decision-ready pack €19 · Scientific report €39 · Professional €49/month.
- Full pricing: talaix.com/pricing.html
