

LSA call prep — Dr. Alberto Maulu (Manager – Technologies, Luxembourg Space Agency)

Thu 2026-09-10, 15:00 (Luxembourg time) · virtual · from info@talaix.com thread

His goal: understand the business, plans and interest in Luxembourg → to assess what support fits. Your goal: leave with 2–3 named programme tracks + agreed next step.

1. Your 3-minute opening (say it, then offer the live demo)

Talaix is a multi-hazard climate-risk intelligence platform, built in Luxembourg. It aggregates Earth-observation data — Copernicus Sentinel-2, Landsat, FIRMS, ERA5 and around 25 integrated open datasets — to analyse ten natural hazards and produce evidence-linked risk reports for banks, insurers, governments and investors. The platform is live today, with user accounts, an API, a reports portal, and an Academy for climate-risk literacy. Our market focus since this month is climate-risk compliance evidence for EU disclosure rules — CSRD and the EU Taxonomy. We are pre-company and pre-seed: this call is about which Luxembourg instruments fit to turn a working platform into a Luxembourg space-data company.

Then offer: "I can show you the live platform in five minutes — the hazard map, a real analysis report, and the compliance evidence page."

2. The asks — restructured (say them in this order)

A. Incubation & company formation (your main ask)

"I want to establish the company in Luxembourg. Which track fits a pre-company DeepTech project like this — ESA BIC Luxembourg, LuxIMPULSE, or another national programme? Can one apply before incorporation, and what are the criteria and the next deadlines?"

(ESA BIC = funding + technical support + credibility; this is also the legitimate route to later co-branding — see D.)

B. Data access & reliability

"The platform already runs on open Copernicus and ESA-family data. To reach a higher reliability tier, I would like access to higher-resolution or commercial data sources — ESA Third Party Missions, contributing missions, or voucher schemes — and ideally a validation partner. What mechanisms exist for that?"

Honest line to keep: "Our assessments are screening-level today; a documented validation roadmap is exactly where agency support would raise us."

C. Alerts (SMS) — the reframed version. NEVER say "competes with government services".

"We built a multi-channel alerting component for environmental hazards — email and SMS — which today runs in a development outbox until an operator is configured. We see it as complementary to national alerting like LU-Alert, not competing with it: a specialised layer for climate-risk events tied to assets and locations users care about. Is there a pilot framework with civil protection or a public body where this could be tested properly?"

D. Credibility / logo — do NOT ask to put the LSA logo on the site.

Ask instead: "Which partnerships carry co-branding rights — for example, do ESA BIC start-ups get to use programme branding? We want credibility the correct way, through an actual programme." (Asking for a logo in call one signals the wrong priorities.)

E. Research & academic partnership

"We are looking for research partners — LIST's remote-sensing work and the University of Luxembourg (SnT) are natural fits. The Academy, our climate-risk literacy track, is built on open material and we would welcome review or co-development — does LSA run or connect to education initiatives such as ESERO Luxembourg? I can send the Academy modules for review after the call."

F. Funding partnership

"Beyond incubation: which funding instruments should we line up next — ESA Business Applications feasibility studies, Horizon Europe via the national contact points, EU space-entrepreneurship programmes like Cassini? We are preparing a pre-seed round of €850K; programme co-funding would de-risk it."

G. Dual-use / rescue (one sentence only, offer a written follow-up)

"Our analytics also serve emergency response and dual-use cases — for example EO-based situational awareness for aerial firefighting and rescue operations, where Luxembourg has airborne assets. If that interests the Agency, I will send a short written note after the call rather than take time now."

H. Network

"And honestly, I am looking for the network: which three organisations or people should I speak to next in the Luxembourg ecosystem?"

3. Questions to ask him (pick 3–4 if time is short)

1. Which programme fits a working platform at pre-company stage — and can I apply before incorporation?
2. What are the next application deadlines in 2026?
3. Does LSA support data-access costs for early-stage companies (vouchers, ESA schemes)?
4. Who should I talk to at LIST / University of Luxembourg / Luxinnovation?
5. What would you need from me after this call — one-pager, deck, demo?

4. Demo plan (5 minutes, if he accepts)

1. Hazard map — one live analysis (real data, e.g. fire or flood).
2. A generated risk report (PDF) — the "evidence-linked" idea in 30 seconds.
3. The compliance page — why banks/insurers are the paying customers.
4. The Academy — for the education partnership point.

Close with: "Everything you saw runs on open EO data today — agency support takes it to validated, commercial-grade."

5. Red lines — do not say

- "We compete with government alerting" — instant red flag. Say: complementary to LU-Alert.
- "Can we put your logo on our site" — ask about programme branding rights instead.
- Any claim of validated accuracy — the platform is screening-level; honesty is the credibility.
- The rescue-helicopter story as a complaint — frame positively as "aerial response analytics", one sentence max.
- Don't mention the ADEM workshop or unemployment — this call is about the company, not personal situation.

6. After the call

Send a thank-you email from info@talaix.com the same evening: 3 bullets of what was agreed + the deck ([talaix_preseed_deck.pdf](#) public Drive link) + Academy link for review + the one-paragraph dual-use note if he reacted to it.
